The following is an examiner's statement of reasons for allowance: The prior art fails to teach a method for operating a precision machine vision inspection system to determine an estimated best focus position usable for inspecting a region of interest of a workpiece, including an imaging system having a camera providing pixel values of at least one configuration of a reduced readout pixel set corresponding to substantially less than a full field of view of the camera along at least one dimension, a plurality of controllable motion axes including a focus axis with a focus axis position sensor, a workpiece stage, wherein at least one of the stage and the imaging system is movable to provide relative motion with respect to the other at least along the focus axis, comprising: overlapping at least a majority of the region of interest and at least part of the reduced pixel set; providing a motion including traversing a focus image range along the focus axis direction using continuous motion; inputting an auto focus image of a respective effective exposure time and exposure duration into the camera during the continuous motion; outputting the pixel values to a control system portion during the continuous motion; repeating the inputting and outputting steps; determining respective positions along the focus axis for at least some of the plurality of auto focus images; and determining an estimate best focus position. The prior art also fails to teach a method of training mode operation for a precision machine vision inspection system including the features stated above and further including the steps of defining a set of auto focus parameters usable to determine a set of auto focus operations for the region of interest having a run mode focus image range, a run mode auto focus motion, a run mode

illumination level and exposure duration usable; providing operations to determine a repetitive inputting of respective auto focus image and outputting of respective data for a plurality of reduced readout pixel sets; providing operations to determine respective positions along the focus axis; and providing operations to determine the estimated best focus position.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
